DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 32-38 and 46-59, drawn to a method and kit for *indirectly* determining the presence of lipidic particles in cell membranes, classified in class 435, subclass 7.1.
 - II. Claims 39-45 and 60-71, drawn to a method and kit for *directly* determining the presence of lipidic particles in cell membranes, classified in class 436, subclass 518.
 - III. Claims 72-90, drawn to a method and kit for determining the presence of lipidic particles, which is indicative of physiological status, classified in class 436, subclass 164.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are different methods and kits with different functions. Group I and Group II differ in that Group I determines the presence of lipidic particles indirectly, while the method of Group II determines lipid particles directly. In addition, the step of forming a first mixture differs between the two groups. Group III differs from Groups I and II because the function of the method and it is to determine physiological status. Therefore, the correlation step of Group III is related to physiological status, while the correlation steps of Groups I and II relate to immune damage in cell membranes only.

Art Unit: 1641

3. Because these inventions are distinct for the reasons given above, have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter, and the search required for one group is not required of the others, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
